Linking to releases

You can share every release you create on GitHub with a unique URL.

Linking to the latest release 🔗

You can share a link to the latest release for a repository by adding `releases/latest` to the end of a repository's URL. For example, the URL for the latest release of `octo-org/octo-repo` on GitHub.com is `https://github.com/octo-org/octo-repo/releases/latest`.
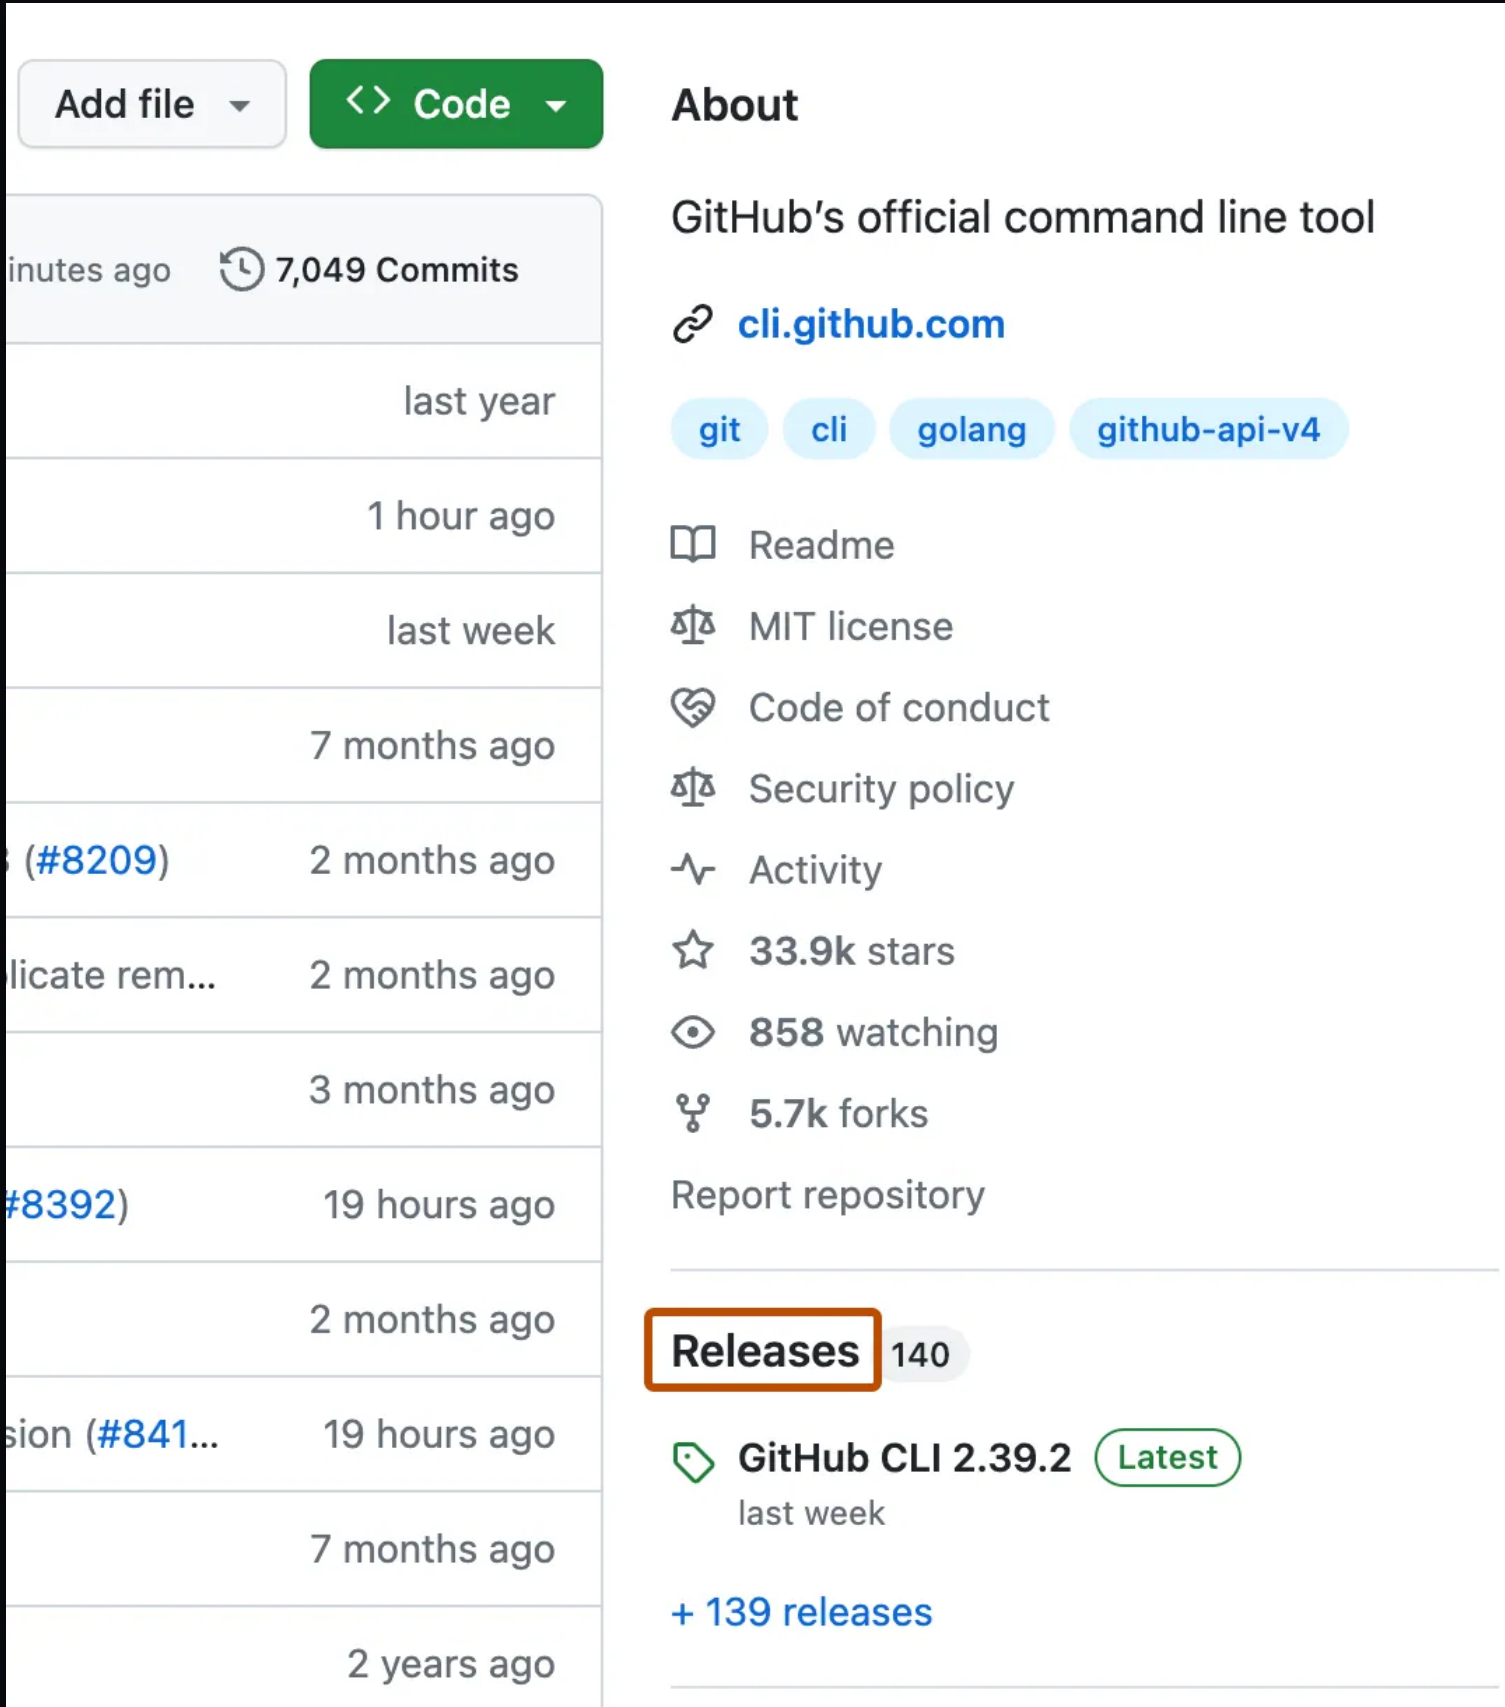

To link directly to a download of your latest release asset that was manually uploaded, the suffix is `/releases/latest/download/asset-name.zip`.

Linking to older releases 🔗

① On GitHub.com, navigate to the main page of the repository.

② To the right of the list of files, click **Releases**.

③ To copy a unique URL to your clipboard, find the release you want to link to, right click the title, and copy the URL.
